0

AT Time = 8

14

12

8

8

shortest = P5 (2)

8

4

3

3

8 → 10

18

13

9

9

10

4

2

2

so Average TAT = 8

so 4 waiting = 4.4 = response time

so scheduling length = 18 → throughput = $\frac{5}{18} = 0.278$ process/unit time

∴ 20/4 waiting = 5 = response time

So scheduling length = 18 → throughput = $\frac{5}{18} = 0.278$ process/unit time

AT BT

"FCFS"

So → P1 0 5

P2 2 3

P3 4 6

P4 6 4

P5 8 2

CT TAT WT RT

5 5 0 0

8 6 3 3

14 10 4 4

18 12 8 8

20 12 10 10

So Average TAT = 9

So Average WT = 5 = RT

∴ Scheduling length = 20

Throughput = $5/20 = 0.25$
